

Scavenger Hunt

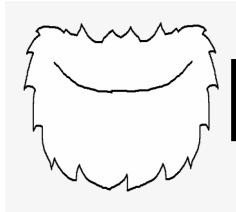

Join us on an educational scavenger hunt, and see how many of the following things you can find while walking in the park, your neighborhood or in your own backyard. Then, post pictures of what you find on our page to share in the experience! Just be sure to maintain appropriate social distance guidelines by staying 6 feet away from other "scavenger hunters"!

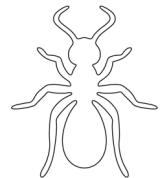

Squirrel: Did you know squirrels eat mostly nuts, fruits, and seeds -- and that squirrels are born blind?

Daffodil: Did you know daffodils are one of the first flowers to bloom in the spring? Animals stay away from eating them because their bulbs contain poisonous crystals.

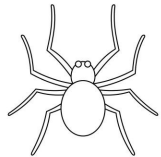

Bird nest: Did you know not all birds build nests? Two that don't are cowbirds, which lay their eggs in other birds' nests, and screech-owls, which use cavities that other birds or critters have hollowed out.

Insect: Did you know insect bodies have three parts, the thorax, abdomen, and head? Insects also have two antennae as well as three pairs of legs.

Tree: Did you know there are more than 99 different species of trees in Ohio? Often you can tell the different types by their leaves and bark.

Spiders: Did you know there are around 40,000 different species of spiders? Most spiders make silk, which they use to create spider webs and capture prey.

Flower bud: Did you know the buds on plants are an early indicator of new growth of some sort? While it may be difficult to discern whether the new growth is a flower or a leaf, identifying flower buds can generally be done by noting their location

Birds: Did you know there are 434 species of birds in Ohio? The cardinal was designated the official Ohio state bird in 1933 due to its prevalence throughout the state.
